0.0.0 Introduction

Pcounter for Toshiba is server software that is intended to reside on a Window server.

Pcounter for Toshiba is used to control walkup user access (**authentication**) to Toshiba MFPs as well as capture walkup usage (**accounting**) for copy, scan, and fax.

A quick technical note; MFP = Multifunction Printer, and in this instance the MFP is the Toshiba printer being configured.

0.0.1 Trial Period Information

Without a valid registration number, the Pcounter for Toshiba software runs will run with full functionality for 90 days in trial mode. During this time there are no restrictions to the software's functionality and it can be used for testing all features. At the end of the trial period a valid registration number must be inserted, or the software will no longer function until a valid registration number is entered.

1.0.0 Goal

The goal of this document is to provide a list of supported MFP models for Pcounter Embedded for Toshiba and more info.

1.1.0 What is Pcounter for Toshiba

Pcounter for Toshiba is Windows server software that interfaces directly with the embedded operating system inside the MFP. Pcounter for Toshiba works in combination with Pcounter for Windows.

Pcounter for Toshiba provides a point of access control (Authentication), the ability to log job based data for copy, scan, and fax (Logging), and the ability to assign page quotas or currency balances to users, debiting them for individual jobs (Accounting).

Pcounter for Toshiba combines all MFP print, copy, and scan data into a single log file managed by the Pcounter for Windows Data Server. Reporting can then be done quickly and easily for all job types using Pcounter Administrator and Pcounter Web Report.

1.2.0 Requirements

Please see our Pcounter System Requirements document at:

http://apps.pcounter.com/docs/pcounter_system_requirements.pdf

The Pcounter for Toshiba server software can be installed on Windows 2008R2 Server or any later Windows "business" operating system. Windows "Home" products that lack domain support are not recommended.

The Pcounter for Windows software (version 2.90a or later) must be previously installed, configured, and in use on the Windows print server before installing and configuring the Pcounter for Toshiba embedded management software on the server.

For more detailed information about Pcounter installation and administration please refer to the Pcounter Setup Guide and the Pcounter Documentation PDFs on the Pcounter Wiki at:
